

Testing

Automated testing

Run:

```
pytest -q
```

The test suite mocks Gemini service functions. This keeps unit/integration route tests deterministic and avoids API charges during normal testing.

Manual testing checklist

Home

- Page loads.
- Form is responsive.
- All required fields validate.

Generation

- Valid data reaches the backend.
- Gemini returns a structured plan.
- Exactly seven days display.
- Nutrition/recovery tip displays.
- User record is saved.

Feedback

- Existing User ID is accepted.
- Feedback updates the plan.
- Original plan remains available in database.
- Updated plan is displayed.

Admin

Wrong key is rejected.
Correct key opens dashboard.
User data is visible.
Original and updated plans can be compared.

API

`/docs` opens.
`/api/health` returns 200.
Invalid input returns 422.
